NEW ABSTRACT

A method is described for identifying an optimal, or preferred set of views for radioactive-emission measurements of a region of interest within the body. The method is based on a model of the region of interest (1000), and the preferred sets of views are identified for the model (1040), preferably using information theoretic measures (1020). The preferred sets of views (1040) may then be applied to the region of interest, in vivo.
